<u>WHAT IS CLAIMED</u>:

1.   Project development software comprising at least one display for a number of structured stages, the displays including user question prompts to receive user input, the structured stages including a trigger stage which is used to analyze problems, a reaction stage in which collects reactions to the triggers determined in the trigger stage, an action stage in which the user determines an action, a conflict stage in which feedback on the action is done, and an evaluation stage in which a final assessment of the action is done, the project development software being such that the user can move between the five stages to facilitate work on a project.

2.   The project development software of claim 1, wherein the project development software includes an active mode in which the user inputs information concerning a project using the structured stages related to a project and a passive mode in which the user can search to find, for a given structured stage, input by previous users for similar projects.

3.   The project development software of claim 2 wherein the user can toggle between the active and passive modes.

4.   Project development software including an active mode in which the user inputs information concerning a project using a number of structured stages related to a project and a passive mode in which the user can search to find, for a given structured stage, input by previous users for similar projects.

5.   The project development software of claim 4 wherein the user can toggle between the active and passive modes.

6.   The project development software of claim 4 wherein the structured stages including a trigger stage which is used to analyze problems, a reaction stage in which collects reactions to the triggers determined in the trigger stage, an action stage in which the user determines an action, a conflict stage in which feedback on the action is done, and an evaluation stage in which a final assessment of the action is done

7.   The project development software of claim 6 wherein the user can move between the five stages to facilitate work on a project.
